

How the Web Works

types
"www.zombiesurvivors.com"
into his address bar.

Average Joe User
Surfing the web
for ways to survive
the Zombie Apocalypse

DNS Server sends the IP number back to browser

The Browser now
sends a request for content
from the actual webserver.

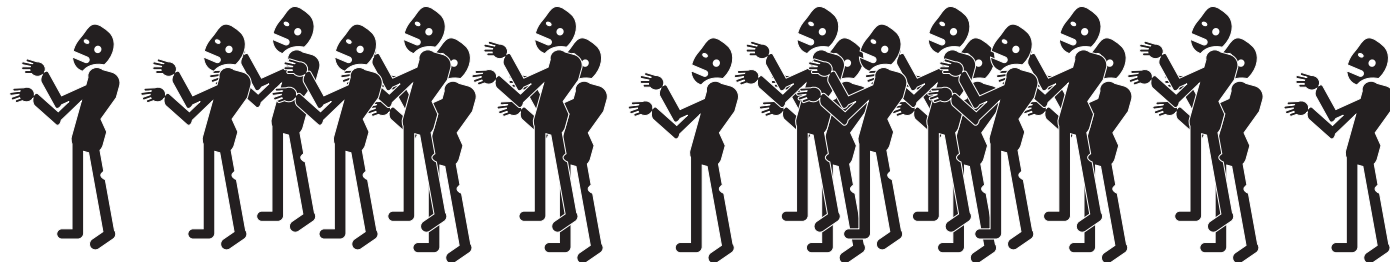

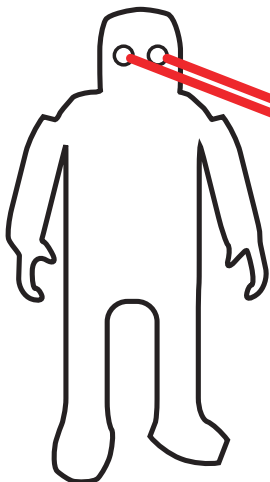

The request goes to the DNS servers who lookup the site **www.zombiesurvivors.com** and see that its IP address is 200.155.10.60

Webserver
200.155.10.60

The webserver responds by sending back the requested content. HTML, CSS, images etc.

IP 200.155.10.60

Joe is now able to order the parts he needs for his giant robot with laser eyes to stop the zombies.
